TECHNICAL SKILLS

LANGUAGES & CORE

JavaScript (Vanilla JS) · PHP · MySQL · HTML5 / CSS3

FRAMEWORKS & CMS

WordPress (Themes & Plugins) · ACF Pro · Gutenberg · REST API · WooCommerce · jQuery

LAYOUT & BUILD TOOLS

Mobile-First · Tailwind CSS · SCSS · GSAP · BEM · Figma · Webpack · Vite

About Me

WordPress & Frontend Developer with **4 years of commercial experience**. Specializing in building custom websites and online stores for **iGaming and e-commerce**.

I build responsive, high-performance interfaces with **Pixel Perfect** precision, following **Mobile First** principles (90%+ mobile traffic) and **BEM** methodology. I develop custom themes and plugins in **PHP** with a clean separation of business logic and templates.

Proficient in modern **JavaScript (ES6+)**, I build custom **Gutenberg blocks** with **ACF Pro** for smooth content management. I specialize in **Core Web Vitals** optimization (30–40% website speedup) and technical SEO (**Schema.org JSON-LD** structured data, OpenGraph, indexing management).

I manage full-cycle project setups: **DNS** configuration, **SSL certificates**, deployment to **VPS and hosting**, containerization with **Docker**, and project builds with **Vite and Webpack**.

Work Experience

WordPress & Frontend Developer

Nov 2024 — Nov 2026

MaxBitSolution (iGaming, Belarus HTP resident)

Custom WordPress development, frontend architecture, and web performance optimization in the SEO department (hybrid schedule).

- Engineered Mobile First interfaces prioritizing mobile traffic (90%+ in iGaming) and optimized Core Web Vitals (LCP, INP, CLS) — boosted page speed by 30–40%, consistently keeping projects in Google's green zone. Made independent UI/UX decisions without Figma mockups.
- Integrated frontend into WordPress from scratch: authored custom PHP themes, maintaining clean separation of business logic, data operations, and presentation templates.
- Built custom Gutenberg blocks and patterns with ACF Pro, enabling the SEO team to assemble landing pages and articles independently without developer involvement.
- Configured multi-language architecture (Polylang / WPML) and regional localization with proper canonical and hreflang directives.
- Customized WordPress core functionality (themes, templates, plugins) and developed custom plugins for the SEO department's business requirements.
- Implemented Schema.org structured data (JSON-LD), boosting search result CTR by 20–30% through rich snippets (ratings, review stars, bonuses).

DEVOPS & ENVIRONMENT

Docker | GitLab CI (CI/CD) | Git / GitHub | VPS / Linux / SSH | DNS & SSL | Lighthouse (CWV) | npm / yarn

LANGUAGES

Belarusian	Native
Russian	Native

EDUCATION

2017 — 2019

Higher Education (Bachelor's)

IPP (Institute of Parliamentarism and Entrepreneurship)
Major: Finance and Credit, Minsk

2014 — 2017

Associate Degree / College

Minsk College of Entrepreneurship
Major: Banking, Minsk

- Configured page caching via WP Rocket, Cloudflare CDN integration, and modern WebP/AVIF image compression — cutting repeat page load times by 50%.
- Handled technical SEO operations: 301 redirects, canonical tags, robots.txt, sitemap.xml generation and validation, and indexing error resolution via Google Search Console — achieving 100% indexation of target pages.
- Supported affiliate and referral marketing programs.
- Collaborated closely with the SEO team, promptly diagnosing and fixing ranking-critical issues and bugs (average resolution time: 2–4 hours).
- Independently managed the entire feature lifecycle: from requirements analysis and architectural design to development, QA, and deployment via GitLab CI and Docker.

Tech stack: WordPress, PHP, JavaScript (ES6+), MySQL, REST API, ACF Pro, Gutenberg, SCSS, Docker, GitLab CI, Cloudflare.

Web Developer

Freelance (Upwork, Kwork, Habr Freelance, FL, Weblancer)

2023 — Present

Turnkey website development, custom WordPress themes and plugins, e-commerce solutions, and responsive markup.

- Successfully delivered turnkey websites from concept to launch: domain selection and configuration, DNS management, hosting and VPS setup, SSL configuration, and final deployment.
- Integrated frontend into WordPress from scratch: built lightweight, high-performance custom themes and WooCommerce shops without bloat or page builders, using PHP hooks, custom templates, and REST API.
- Designed flexible and intuitive client admin dashboards with ACF Pro.
- Converted complex Figma mockups into responsive code with Pixel Perfect precision for all devices (Mobile First). Built complete projects from references and text specifications when mockups were unavailable.
- Built interactive interfaces and dynamic UI components using modern Vanilla JavaScript (ES6+).
- Integrated third-party APIs (payment gateways) for e-commerce solutions with secure transaction processing.
- Ensured web security (validation, sanitization, output escaping, protection against XSS and SQL injection) and code-level SEO optimization (clean semantics, Schema.org structured data, fast asset loading) at the frontend stage.
- Performed zero-downtime website migrations between servers and hosting providers.
- Provided post-launch support: website administration, content updates, and adding new sections.

Tech stack: WordPress, PHP, JavaScript (ES6+), HTML5, SCSS, Tailwind CSS, MySQL, WooCommerce, REST API, Gutenberg, ACF Pro, Git, VPS / Cloud hosting.

Logistics Specialist

Retail Banking Systems LLC (formerly Home Credit Bank)

2018 — 2022

Administration of loan agreement workflows, coordination of B2B operations between the bank and partner online stores, and maintaining internal bank reporting. In 2022, transitioned into web development to build a professional career in IT.
